

The background of the page features abstract, flowing, wavy lines in shades of pink and purple. These lines originate from the corners and edges, creating a sense of movement and depth. The lines are composed of many thin, parallel strokes that curve and twist, giving the background a dynamic, organic feel.

How to create a GitHub page .....	1
Index .....	2
Go to the GitHub page and create the repository .....	3
Upload the index.html .....	3
Modify the settings of the repository .....	5
Last step opens the page.....	5

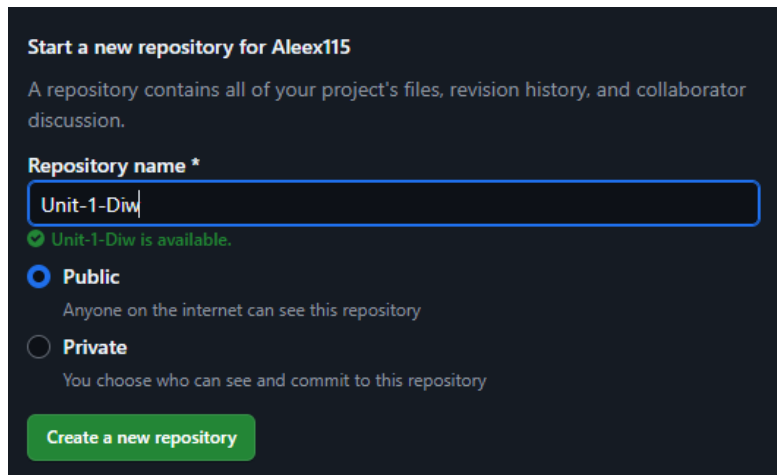

## Go to the GitHub page and create the repository

Once you are in GitHub if you aren't registered you must do it

If you are already registered you have to create the repository, is the first you see when you open the page

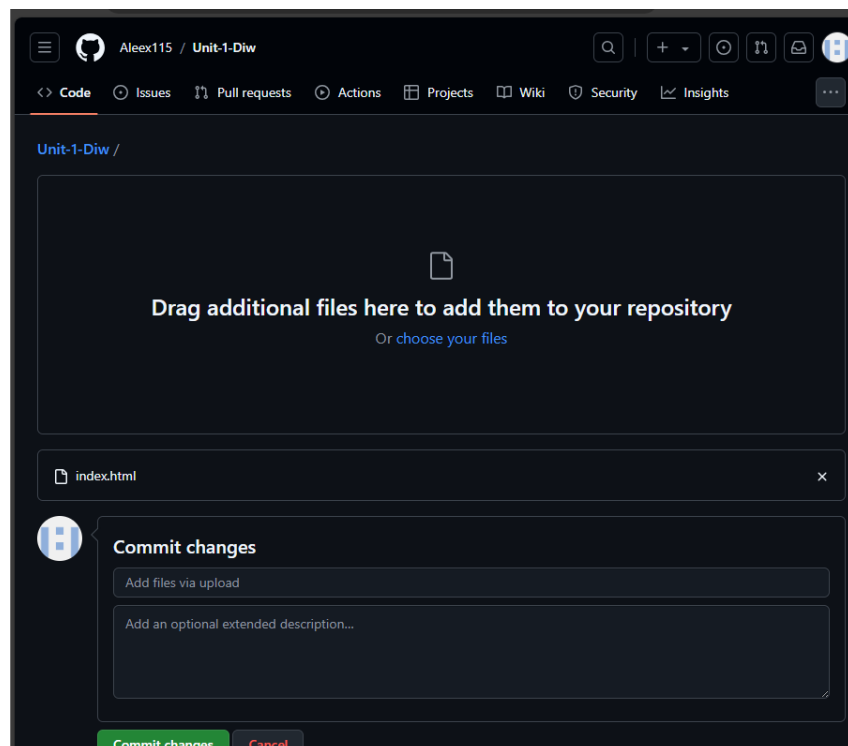

Each one chooses the repository name but it has to be public if we want to create the page

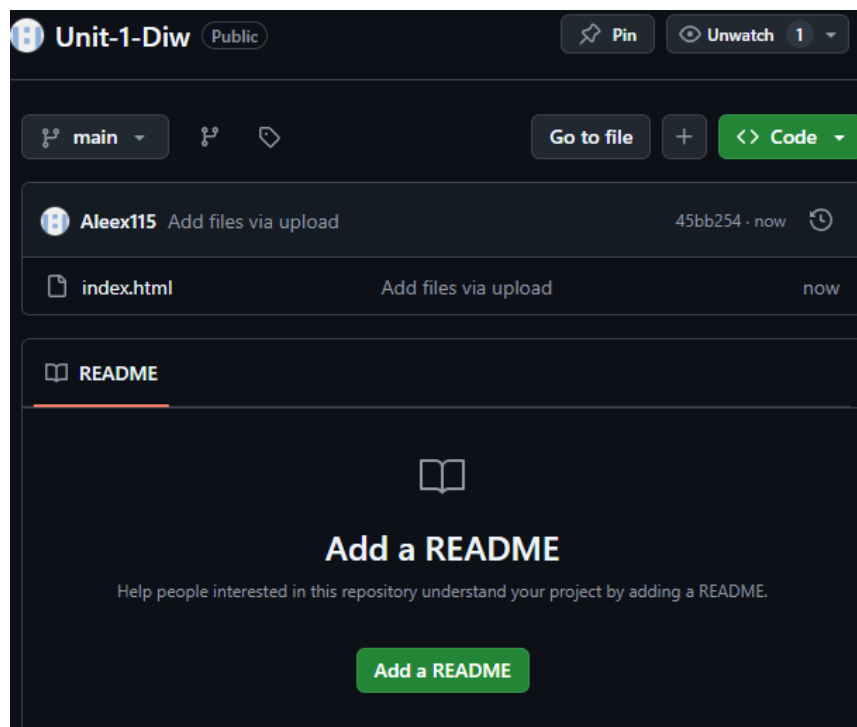

## Upload the index.html

Once we are in the repository, we have to select the file and write the commits changes if we want, else we commit the

changes

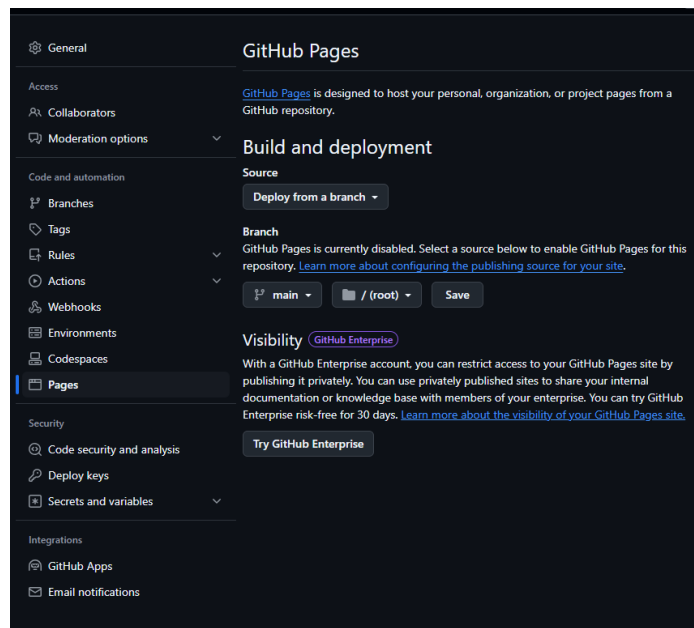

If all is correct you must see this, the main page of the repository

## Modify the settings of the repository

In setting we go to pages and select the main branch and save

## Last step opens the page

Now you only have to click in your domain and you will see the web
